To the Selection Committee

Scholarships of the Government of the Czech Republic

**Subject: Motivation Letter – Scholarship of the Government of the Czech Republic
(Master’s Programme, Academic Year 2027/2028)**

Dear Members of the Selection Committee,

My name is Alamin Sarker, and I am writing to apply for the Scholarship of the Government of the Czech Republic to pursue a Master’s degree in Computer Science, specializing in Natural Language Processing (NLP), for the 2027/2028 academic year.

I am completing my B.Sc. in Computer Science and Engineering at Bangladesh University, Dhaka, expected in January 2026, with a CGPA of 3.78/4.00. Since 2024, I have worked as an undergraduate researcher in NLP, focusing on Bangla Entity Linking in low-resource and noisy text settings — studying how annotation ambiguity and representation choices affect entity disambiguation, and conducting empirical analysis under constrained data and computational resources. This work, emphasizing methodological rigor over purely scaling architectures, is being prepared as a manuscript targeting ACL/EMNLP workshops.

Alongside my research, I have worked as a Software Engineer at Technometrics Limited since April 2024, where I have developed scalable systems integrating NLP-based sentiment analysis and topic modeling, and optimized performance through containerized deployment with Docker. This combination of applied engineering experience and research has given me both the practical and theoretical grounding to pursue advanced study in this field.

I am specifically drawn to the Czech Republic because of Charles University’s Institute of Formal and Applied Linguistics (ÚFAL), globally recognized for its research in computational linguistics, multilingual processing, and low-resource language technology — an area directly aligned with my own research into Bangla, a language spoken by over 230 million people yet still significantly under-resourced in NLP. Studying in this environment would allow me to deepen my technical expertise while contributing to and learning from a research community working on exactly the kind of problems I am committed to solving.

Upon completing this degree, I intend to return to Bangladesh and continue advancing Bangla NLP and low-resource language technology — whether through academic research, industry, or both — helping build the technical capacity needed to bring modern language technology to Bangla speakers. I see this scholarship as an opportunity not only for my own academic growth, but as a way to bring back advanced research skills that are directly relevant to closing this gap for my country.

I am confident that this scholarship will provide the academic training, research environment, and international exposure needed to advance my work meaningfully. I would be honored to represent Bangladesh as a recipient of the Government of the Czech Republic’s scholarship, and I am fully committed to completing my studies successfully and returning home to apply what I have learned.

Thank you for considering my application.

Sincerely,

Alamin Sarker
